ET

SIVE

1642.

Et ab aëtherum creatione Kepleriana 5635.

Wherein is contained a three-fold
Kalendar Ecclesiasticall, viz. The Julian: the
Gregorian, and the true Accompt, with all
the Lunations, Planetary Configurations,
Eclipses, and other Cœlestiall ob-
servations, and Astrologicall Predi-
ctions therein.

Calculated exactly, and composed by
JOHN BOOKE for the
year of Christ,

⁂ q u a n t u m p o p u l u s e b a t ⁂
⁂ c r i s t i a n o r u m f e b a t a b e o .

— O quam mira & magna potentia Cœli est,
Quo fene nil pareret Tellus, nil gigneret Aëther.

Dayes of the Moneth.

The age of the Moone.

An Abstract of the Tide Table with the age of the Moone shewing the howers and minutes of full Sea at London Bridge, as also at Tinnmouth, Hartlepoole, Whitebay, Amsterdam, Gascoigne, Brittain, Galixia, and the places adjoyning every day this year, 1642.

The age of the Moone	Inc.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
of the Moone	Dec.	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
Full Sea at Lond.	3 ho.	3	4	5	6	7	7	8	9	10	11	11	12	1	2	3
at Lond.	3 mi	48	36	24	12	0	48	36	24	12	0	48	36	24	12	0

Now the use of these tables follow. Example. the sixth day of January this yeare. I would know when it will be high-water at London-bridge, and all the above named places. I looke over against the 6. day of January, and I find the Moone to be 15 dayes old, which I likewise find in this small table above, and underneath in full Sea I find 3 howers, which sheweth that it is full Sea or high-water at London Bridge, &c. the sixth of January this yeare at 3. a clock in the morning. Now every Tide altereth 24. minutes of time and is later then the former, therefore the high-water at London Bridge, &c. the same sixth day of January will be again at 24. minutes past 3. a clock in the afternoon. The Rule is so easie, that it needs no further illustration, unless to him, Cujus manus sunt sub pallio, or those that pleade ignorance.

Yet you must observe that it floweth one point of the Compass more in the Spring tides, that is at the New and Full Moones, than it doth at the Neap tides, that is, at the quarters of the Moone, especially if it bee a River where there is any indraught, and that is of good distance from the Sea; yea when there is neither rage of windes, land-floods, nor other cause to produce or hinder the said effect; As for example, It floweth at London-bridge at the New or Full Moone, when there is South-west or North-east: but in the quarters of the Moone it scarcely floweth there when the Moone is South-west and by South, or North-east and by North. And at London-bridge it commonly floweth 5 howers and ebberth 7 howers, though at other places it is 6 howers flood and 6 howers ebbe. The latitude also of the Moone and her Aspects with the Planets and Land-floods and great winds much altereth the usuall course of the Tides.

The Sea hath six 3 alternate course she keeps:

From deep to shore, and from the shores to deeps,

What ere the cause be it ne're resteth stound,

But's ebbing, flowing, alwaies going round.

Sure Cynthia (night's Lamp) with her chang full Lawes

Commands the Ocean, and it's motion cause.

January hath xxxi. Dayes.

The Julian or
English Account

Can Sol and Jove, and he with Hermes meet
And Jove with Venus, Sol with Saturn greet
Can these Configurations & These Aspects
Produce no influence & nor worke effects;
Senselesse is he who doth affirme the Stars
To have no force on these Inferiours.

The Julian, or
Englifo Accoun

The Prince of Planets, Sol, dayes glorious eye,
Mounted on's Throne, rules in full Majestie,
And crown's this year with happinesse throughout.
And as King Charles is compast round about (men
With Dukes, Earles, Lords, Knights, Esquires, Gentle.
In Courtly fort: Stars are Sol's royall traine.

The Julian or
English Account

The Moon in Libra with the Dragons head
Oppos'd by Venus, hath her browes orespread
With darkenesse; So our blinded Ideots hinder.
The Church her lustre, and Christs spouse his splen-
In this her trouble stupid Saturne swayes (dor.
But both are banisht by Sol's royall rayes.

The Julian, or
English Account

Let Martialists and Jovialists beware,
And of their actions let them have a care.
Nay certainly this is a time of wonder.
What other matters happen; it will thunder.
Mars first with Jupiter, next with Saturne meeting.
This Month of May, may have an unkind greeting.

The Gregorian or
Foreign Account

The true Account
to the year 1734

*The Julian, or
English Account*

This month hath many weathers, and these dayes
Scarres new Aspects some strange effects will raise.
There's sometimes Quintiles, Quartiles, Tredceiles.
And sometimes Oppositions, Trines sometimes,
Heaven is the seal; the wax men; Aire, Earth, Seas,
And all Gods handiworks are witnesse.

*The Julian, or
English Account*

Now Mars and Phœbus rule with Procyon,
And in each Quarter have Dominion.
Biquintiles, Semisextiles now are rise,
Quartiles and oppositions they cause strife.
The Moon, Earths Planet presently conveys
The Influence of all Cœlestiall rays.

The Julian, or
English Account

If gentle Venus did not mixe her beame
With Jove and Saturne, heat would be extreme,
Though Sol with Hermes retrograde be joyn'd,
And Jove oppose Sol, raising mighty wind;
Yet fire and water, aire, and earth agree,
And by their mixture make sweet harmony.

The Julian, as
Swedish Account

The Julian, or
English Account

Contemplating the Heavens I did espie
Saturne, Jove, Mars, Sol, Venus, Mercury
In opposition; whose strong Influence
My weaker judgement elsfoone did convince,
And told me (God permitting) rain, hail, snow,
By them was caus'd, and sturdy winds would blow.

The Julian, or
English Account

The Sun and Hermes through the Scorpion pacing
Mars retrograde in's detriment outfacing,
Ingender rain or snow and bitter stormes,
And cruell tempests, if no worser harmes;
Yet Venus with the Scorpions heart, and Jove
In square aspect will not unkindly prove.

The Julian, or
English Account

Saturne and Hermes still are making strife,
And some imagine mischief all their life,
Though Jove, Sol, Venus pacifiers are,
Yet these were caught, intrapt in their owne snare,
Confound, destroy (O Lord) thine enemies,
The plotters of all horrid Treacheries.

The Julian, or
Engliffe Account

Thus by Gods Providence continually
The nights and dayes succeed incessantly.
The Seasons in their seasons God doth bring
Summer and Harvest, Winter and the Spring.
And nothing's done, which is not mov'd each hower
With secret touch of Gods eternall power.

A Prognostication. Booker. 1642.

A Description of the severall parts of the
Almanack for the yeare of Christ,
1642.

In the first columnne is placed the Golden number, so called, for the excellent use it hath in finding the day of change of the Moone, This yeare it is 9. and in my Almanacke is noted in a Red Character or figure over against such a day of the Month, as the Moone changeth on. The next yeare it will be 10. And so every yeare increasing one, till 19. And then it beginneth againe.

The second columnne is the dayes of the Month.

The third, the dayes of the Weeke. B in the Julian or English Accompt, being the Dominicall letter.

The fourth columnne hath Feasts and Holidayes, with the places of the Planets. The beginning and ending of the Tearmes, &c.

The fifth is the Signe and degree the Moone is in every day at noone.

The sixth is the Houre and Minutes of Sunne rising at London, By helpe whereof may be knowne his setting, the Length of the day and night every day throughout the yeare.

Double the houres and minutes of Sun rise (60 minutes make an houre) and they make the length of the night.

Substract the houres and minutes from 12. houres, and the remainder is Sun set.

Double the houres and minutes of Sunne set, and you have the length of the day. It is so plaine, that example is needlesse.

The seventh columnne, is a probable conjecture of the Weather, from the motions of the Starres and Planets, with the old, and some of the new Aspects, most in force
C chs

A Prognostication;

this yeare : The new are thus noted S S. a semi-fertile, Q a Quintile, Td a Tredicile, Bq a Biquintile, Vc a Quincunx.

On the other Page is the Forraigne Account: E being Sunday Letter, and it is 10. dayes before ours.

And thereto is adioyned the true Account being 12 days before ours, And O the Dominicall Letter.

A Briefe Description of the foure Quarters of this Yeare.

The Spring beginneth at the ☉ entrance into the first scruple of ♀ upon Thursday the 10 of March, 46. Minutes past 9 of the clocke in the forenoone: ♀ & Q being in Domo Regia, the 10 house of the heavens, J in the 8 house: The ♀ in the end of the 5 house: The ☉ and ♀ in the 11 house.

The Summer beginneth at the ☉ entrance into the first minute of S, which this yeare with us is on Saturday, the 11. of June, 8. minutes past one of the clocke in the afternoone. The ☉ ♀ and Q are in the 9. house of the Heavens which is called Domus Religionis, &c. The ♀ with the J in the 7. house, ♀ in the 6. and J upon the Cuspis of the 7. house, and ♀ in the end of the 5. house.

The Harvest beginneth on Thursday the 13. of September 42 minutes past 2 of the clock in the morning, at which time the ☉ entreteth the beginning of ♄ in the 2 house; the ♀ in J with Q, both in J to ♀ and ♀. ♀ and the ♀ in the East, ♀ and ♀ in the West, and J in the 9 house in his Dertiment opposing J in the third in hers: must necessarily produce an extraordinarie windie and tempestuous season, with much raine and fleete this quarter.

The Winter beginneth on Sunday the 11 of December 16 minutes past 3 of the clocke afternoone. The ☉ then entring ♄, the ♀ within 2 degrees 22 minutes of her change in the 7 house of the heavens. For that night, at 25 minutes past 6 in the evening, the ☉ and ♀ meete in 6 minutes 41 seconds of ♄ in the end of the 5 house, and at the ☉ entrance as aforesaid; J is directly in the angle of the South, ♀ in the beginning of the 11 house, and ♀ in the 11, J in the beginning of the 12, very unfortunately placed: But at the time of new Moone, you may behold the said 11 of December, ♀ and ♀ South West, and Q in

♄ in the west angle, neare her setting, all shining very cleare and bright: And ♄ in the south, and in the south east: You may see Pleaides some 22 degrees from ♄: and more to the south-east you may behold Orion, Hercules, with many other bright stars, only the ☉ ♀ and ♄ are under the Earth.

Now having exactly ballanced the significators of every Quarrer of the yeare, and Lunation of the ♀, I found the royall ☉ to have 60 dignities, ♀ to have 54, ♄ 48, ♀ 40, ♄ 31, ♄ 30 And ♀ but 26. Whereby I adiudged the ☉ to be Lord of this Yeare, with whom ♀ and ♄ must have a share. And because the ☉ in the revolution of the World, as the Astrologians terme it, in the 11 house. Dignitatem præminentem & nominis famam, illis Regibus & Regni Subditis affert, qui cognatione aliqua signo Arietis (in quo ☉ est) divinciuntur, Et Florentem & latum statum plebi. Sub magistratu, & dona Regum Pollicetur, & quia ♀ particeps ejus est cum illo significat commodam & utilem amicitiam qua alter alteri benefacere studebit, Sed ♄ hoc anno discordias & odia perniciosâ, quæ cades sequuntur, excitat, & furra frequentia nunciat; Nam in Vernali figura est in 28 gradu ♄ gradu suæ exaltationis in 8 domo fortis. Et in Æstivali in 4 gradu ♄ domo propria, in fine 6 & principio 7 Domus Cæli, in quo ♄ cum Cauda Draconis locantur: In Autumnali Themate ♄ est in 9 Domo in 17 gradu ♄ detrimenti sui, Retrogradus, est in oppositione ♄; & in Hiemali constitutione Cæli in 12 domo infœliciter positus etiam in detrimento, Qui postus itinera infesta facit latronibus & prædonibus, in quibus multi misere trucidantur, Sed Fœlix Criminibus Nemo erit Diu; The Gallowes is the Turpures Pulpit, Et Insidiatori par nulla, nec Vlla latroni pœna datur. It is a Rule among the best Astrologians, that the fortunate Planets, such as ♄ ♀ and the two great Luminaries, the more dignified they be, the greater good they produce upon these sublunarie Creatures. And the unfortunate disposition of unfortunate Planets, such be ♄ and ♄, the more they be troubled, disturbed, or debilitated, the worse and more malicious they are, and consequently do hurt and annoy the more speedfully.

Quicquid patimur mortales, quicquid facimus.
Venit ab alto, regitur tatis mortale Genus.

A Prognostication.

Of two great Lunar Eclipses which will
bee seene here in England and other
places this Yeare.

The fourth day of Aprill being Monday this yeare 41 minutes past 11 of the clock in the night at London, the \odot will begin to be darkened: the next morning viz. being the 5 of Aprill, 5 minutes before one of the clock, The Moone will be in the beginning of her totall obscuration. The true opposition of the Luminaries or greatest darknesse of the Moone will bee at 42 minutes past one of the clock, she will begin to recover her light 29 minutes past 2 of the clock. And at 43 minutes past 3 of the clock in the morning of the 5 of April she will shine clear & have her full light againe, The parts darkened are 17 of 24 at the beginning of her Eclipse shee hath latitude 0 grad. 4 minutes, At her greatest darknesse 9 minutes, 30 seconds, and at the end of the same 15 minutes 48 seconds all septentrionall ascending, from the beginning to the end will be foure houres, two minutes, and she will appeare totally darkened of a very blacke colour, mixed Greene and reddish. The beginning of the Eclipse is in the 10 house, the middle in the 9 house, and the end in the 8 house of the heavens, shee will bee in 25 degrees 11 minutes of Σ . The effects and influence of this Eclipse will appeare about the 10 of September next, and continue in force unto the 11 of January 1643. Saturne in 20 degrees 4 minutes of χ in the 2 house, hath Dominion in this great Eclipse of the Moone; Qui consuevit excitare horrendum frigus, tempus nivolum, glaciolum, grandinosum, nebulosum & pestilens, Nubes densas, & tempestates aduersas: Luna Eclipsata in signo Σ famem significat, & Atrocissimas aggritudines morbosque pestilentes, procellosos ventos ingerere consuevit, Denunciat Schismata inter Ecclesiasticos, Et magni clarique viri interitum minatur, Et habet significationem super Principes Ecclesiasticos & Prælatos, præsertim in virili ætate constitutos. Those people that have either the \odot in part of fortune, mid heaven or the Periscope of their Nativitie in 25 degrees of γ , Σ , ψ or β , or the Lord of their nativities in any those places, or the 20 degree of χ , λ , Π , and \mathcal{N} ; And those Countreies and Cities subject to those signes, and within 5 degrees of those places shall

BOOKER. 1642.

shall have unlookt and unwitht for accidents happen to them.

Nihil timendum video, sed tamen timeo.

Of the Second Eclipse of the Moone.

The Second Eclipse of the Moone visible with us, will be on Wednesday the 28 day of September betwixt in the morning, that is to say, the beginning will bee at 38 minutes past one a clocke in the morning. The beginning of her totall darknesse at 50 minutes past two of the clock, her greatest obscuritie which will be very blacke at 39 minutes past 3 of the clocke, shee will begin to recover her light at 28 minutes past 4. And the end of the Eclipse will bee 40 minutes past 5. of the clocke in the morning: so that from the beginning to the end will bee 4 houres 2 minutes as in the other Eclipse; This Eclipse hapneth also in the 8 house of the Heavens, but in the opposite sign to that of Aprill; The Moone is exactly in opposition to ♀ and the ☉, she with Anabibazon, and they with Catibabazon; ♀ is Lord of this Eclipse in 15. degrees of ♊ in the 2 house, And the Effects will begin about the 23 of July 1643. and will have end about the 23 of November following. Deus omnia avertat.

Of the 12. Signes of the Zodiaque, and of the Countries and Cities subject unto them.

Daily experience sheweth that great conjunctions of the Planets, great Eclipses of the Luminaries especially of the Sun, have wonderfull and strange effects, and worke rare events in those places, and upon those people subject or under the Planets, Stars, and signes of Heaven. Hence we observe some Countries, Cities, and People flourish in wealth, peace, honours, health, and as it were surrounded with all blessings under the Heavens, while other places and people are purined with fire and sword, dearth, death, plagues, and famine. And though we are taught otherwise, that God for the sins of those places and people living in them punisheth them, than can be foretold by any naturall cause whatsoever, yet keep

A Prognostication.

plug my selfe within the bounds of reason, and what long experience hath oft-times infallibly proved, I will presume to set downe as I find recorded in Aurhenticke Astronomieall Writers touching the power and influence of the 12 Signes, over certaine Countreies and Cities, that when any such great Conjunctions, Eclipses or other heavenly Phenomenas happen, they accordingly may provide and prevent; for *Prævisa minus Lædunt.*

Aries γ

Hath Countreies, England, France, Germanie, Suebia, Sillesia the higher, part of Polonia, and Burgundy, Denmarke, though some say ∞ hath dominion there, Baithenia, Syria, Palestine.

Of Cities it hath Naples, Capua, Ancona, Ferrara, Florence, Verona, Bergamo, Lindaw, Trastecum, Padua, Martelles, Epidaurum, Crackow, Augustam, Cæsaream, Vincennum..

Taurus δ

Hath Russia, Polonia the great, the North part of Swerbland, Ireland, Croatia, Campania, Delbertia, Rhetia, Franconia, Parthia, Persia, the Islands Cyclades lying betwene Europe and Asia, Cypus, and the Sea townes of Asia the lesse.

Of Cities, Verona, Sena, Mantua, Tarentum, Panormum in Sicily, Perusium, Parma, Caput Distrie, Bitris, Tiguræ, Lacerne, Ratis, Nertis, Verbiopolis, Carolitade, Liepzig, Posnania, Slesnam, Novograde.

Gemini II

Vnder II are Sardinia, part of Lombardie, part of England, Flanders, Brabant, the Dukedome of Cleverburgh, Vircania, Armenia, Martiana, Cyrenaica Martica, and the lower Egypt.

Of Cities it hath Cordoba in Spaine, Aiterbium, Cesenam, Turnie, Cercellas, Rhegium, Epvaine, Buges in Flanders, London, Wentz, Ritzing, Hasford, Wamberg, Willicum, Nozemberg, though some say it is subiecte Δ .

Causet

Cancer ♋.

Hath Scotland, Granada, some part of Burgundy, Holland, Zealand, Prussia, Numidia, Africa, Ethiopia, Colchis, Carthage.

Of Cities, Constantinople, Tunis, Venice, Genoa, Lucca, Pisa, Milan, Vincenza, Berne, Porke, St. Andrews in Scotland, Lubeck, Magdeburg, Altembergh, Soplick.

Leo ♌.

Hath Gallia togata, the Alpes, Italy, Sicily, Apulia the kingdome of Bohemia, though some referre it to S. part of Turkie, Aemilia, Sabina, Phenicia, Chaldea, Archina.

Of Cities, Damasco, Syracula, Rome, Ravenna, Cremona, Alms, Confluente, Prague, Lintz, Cremilian.

Virgo ♍.

Vnder ♍, are Achaia, Greece, Creete, Croacia, Carthina, Archelina, the Dukedome of Athens, Mesopotamia, Babylon, Aſiria, a part of Gallia comata, a part of Rhene, the lower Syleſia.

Of Cities, Ierusalem, Corinth, Rhodes, Dapſa, Sagina, Brundusium, Aretium, Novaria, Choloſe, Lyons, Paris, Baſil, Heidelberg, Erphord, Alratillavia.

Libra ♎.

Hath Auſtria, Aſſatia, Littonia, Sabaudia, Delphi. Nauium, Bacciana, Thulcia, Calpia, Heres, Chabada, Deſim, Trogloditicam Sundzaviam.

Of Cities, Liſbone, Arles, Caſetam, Landam Suſſa n, Placentiam, Felkirechium, Feiburgum Bifconite Argentinam, Spiers, Franckford at Rhene, Palam Sueborum, Alimpnam, Weilbranc Friſſingam, Moſpachium, Lendshurgum, Alenna in Auſtria, Antwarpe.

A Prognostication.

Scorpio ♏.

Vnder Mare, Norway, the upper Bavaria, Metagoni, Icthis, Comogena, Cayadocia, Idumea Mauritanis, the Kingdome of Fes, Gerhulia Catalonia.

Of Cities, Algiers, Valencia in Spaine, Trabe Pond, Urbium, Aquilegia, Pestoium, Camerinum, Carutium, Forum Iulium, Mellanum Niennam, Alchstadium, Bonacium, Sedanium, Frankford upon Oder.

Sagittarie ♐.

Hath Spayne, Dalmatia, Sclavonia, Hungarie, Croatia, Milnia, Celtica, Chirzonia, Arabia the happy.

Of Cities, it ruleth Toletum in Spaine, Colatere, Gutinam, Narbone, Auenton, Tolenta, Aegyptus, Sindgard, Rottenburgue, Indenburgue, Buda, Gasconia.

Capricorne ♑.

Vnder it are Macedonia, Illiria, Thracia, Bostina, Albania, Bulgaria, part of Greece, Masovia, Lithuania, Saronie, Vassia, Thuringia, Marchia, Scitrie, the Dyachages Islands, India, Ariana, Gedrosia.

Of Cities, Oxford, Wechlin, Iuliacum, Cleuonia, Berge, Gaunt, Alina, Brandenburg, Augusta Aindelicorum, Constance, Derthona, Favencia.

Aquarius ♒.

Hath Amazonia, Sarmatia, Tartary the great, Malachia, Mucovia, The south part of Sweetland, Cestphalia, Mosell, Piemont, part of Bavaria, Ethiopia, Drisiana, Sogdrana, Media, Arabia the Desert, and Strya.

And of Cities, It both Hamborough, Breime, Montserat, Pflaurum, Erent, Saltzburgh, Ingolrade.

Pisces ♋.

Vnder ♋, bee Sicilia, Calabria, Portugall Galitia, Normandie, Dhalania, Salamonia in Libia, Samantra, Lydia, Pamphilia, and Egypte the higher.

Of Cities, Alexandria, Hispalis, Compostella, Parentium, Rhothomagum, Moymes, Ratisbone.

Of the seven Planets, their natures effects and qualities.

Of Saturne ♄.

Saturne is an enemy to mankinde, and the greater infortune: yet if he be well placed, he is among the Planets as a graue Counsellour is in a kingdome: but being ill seated, he playeth the Rebelle. His ☿ or aspect with ♄, in Spring and Haruest bring wind & raine, in Summer, haile, raine and thunder. With ♄ in Spring & Summer, rain, haile, and thunder, in Haruest cold raine, In Winter raine or snow. With the ☿ he causeth Apertio Portarum, or when the ☿ goes from him to the ☿, or from the ☿ to him by any be-ines, then is great and manifest change of weather, causing raine, haile, snow, and thunder according to the time of the yeare. With ♄ he usually causeth sudden cold, raine, and frowes, and sometimes snow. With ♄ he causeth tempests raine and snow, as the time of yeare requires, And in Winter, miram addie frigoris acrimoniam, and often causeth great frosts, he produceth the East windes, his day house is ☿, his night house is ♄, his exaltation is ♄, and hee hath beene very strong these 4 or 5 yeares last past, passing through both his houses ♄ and ☿: his fall is ♄, and his Decriments be ☿ and ♄.

Saturnus significat frigidam pro'em, Iudeos, Jesuitas, Papicolas, Sectaristas, Rusticos, Curiales, Sutores, Figulos, Vespilones, Ciocarios, homines melancholicos, & qui solitariam vitam amant, Eremitas, Monachos. &c. Et si sit bene dispositus, habet significationem de Adficiis, ducendis Aquis, de Hereditatibus, & Laoribus. Sed si fuerit cadens & infelix, de morte, luctu, miseria, desperatione, & carcere. At si fuerit potens ac male dispositus, de continuis malis, calumniis, & oppressione miserorum, cogitat.

A Prognostication:

Of Jupiter ♃.

Jupiter is called the greater fortune: he is nature's friend, And as a good Governour is in a kingdom, so is hee amongst the Planets, he is termed the father of clearnesse, producer of wholsome gales, and causeth faire weather, he is of a very bright fulgent Aspect. When he is ♄ with ♄, as this yeare he is in May the 14 day at noone, he causeth heat, raine, thunder and lightnings: his other aspects causeth snow, darke cloude and turbulent weather, regarding the time of the yeare, and great windes: His ♄ or Aspect with the ☉ commonly produceth windes driving away raine, in Spring and Harvest he bringeth hail, in Summer thunder and lightnings: but for most part hee causeth faire, cleare, and wholsome winds in all seasons of the yeare. With ♀ in moyst Signes, hee bringeth mild raine and wholsome showers, and at all times in other Signes faire and pleasant weather. With ♀ it is a certaine signe of winde, Apertio Portarum, ingending a most vehement conflict of winds and blasting stormes: and as often as the ♄ goeth from the body or Aspect of one of these two Planets to the other, as this yeare you may often observe, be sure of winde. And when ♃ hath dominion, and is aspected by the ♄, it is faire weather with white dispersed cloudes, and a Blackrell coloured skie, and he ruleth the North winde,

Et sub Iove rosea profapia, viros honoratos, Principes Ecclesiasticos, Prælatos, Cardinales, Episcopos, Theologos, Cancellarios, Conciliarios, Iuris-consultos, Iudices, Senatores, & primarios urbium, &c. Si bene dispositus, de honoribus, divitiis & magistratu cogitat. Si cadens, de luxu, misericordia, patientia, & perferendis incommodis. Si potens & malè dispositus, de ambitu, pompa, & prodigalitate.

The day house of ♃ is ♄, his night house is ♄, his exaltation is ♄, his detriments be ♄ and ♄, and his fall is ♄, wherein he hath lately bene, for at the ☉ ingresse into ♄, or in the Spring quarter 1640, he was mightily afflicted by the conjunction of ♄ with him in ♄, in the second house of the heavens, which is the house of substance, or as the Astrologians terme it, Domus lucri, census, peculii atque supelletilis appellatur, and iudgements astronomical are given thereto of fines, Amercement, Dulces, distresses

stresses Capite census, or Acapitations, and infinite like things, what hath happened to Jobstallists since that time I need not to relate, and there is none to scot-free, but may remember the residue; Dum causas præteritorum interpretamur, eadem quoque Methodo & futurorum docemus, nam futura a præteritis non specie, non genere differunt, sed tempore tantum, quod eadem ut accidens comitatur.

Of Mars ♂

Mars is intemperately hot and dry, cholerick of nature, malevolent, and the lesser infortune, If he bee well placed, he is amongst the Planets, as a good Captaine is amongst souldiers, but if ill seated he playes the Tyrant, he is of a fiery red colour. In May this yeare there is a great meeting betweene him and h, the 27 day, about 9 of the clocke in the night, in the 24 degree of ♄, time will make manifest the effects; without doubt it will produce thunder and lightnings &c, ♄ his aspect with the ☉ causeth dry windes, or drought, in waterie signes thunder and raine, in Winter great windes, raine and snow, with ♀ it is Apertio Portarum causing in Spring and Harvest raine, in Summer raine, showers, thunder and lightnings, in Winter cold and snow. ♄ with ♀ in windie signes great windes, and perhaps thunder and lightnings, in hot and dry signes heate and drought; But generally he brings fierce, suddaine, and impetuous winds with various weather, with the ♃ he alters the weather as the season requires, he is cause of intemperate heate, thunder, lightnings, conflagrations and fierie expressions in the aire, and when hee is in waterie signes he causeth raine, and he ruleth the West winde.

The day house of ♄ is ♃, his night house is ♄, his exaltation is ♃, his detriments are ♄ and ♄, and his fall is ♄.

Et sub Marte Russia propago, omnis generis Milites, belli Ductores, Satellites, Medici, Chirurgi, Archymiste, Bombardarii, Lances, Victores, Carnifices, Latrones, Officia ignis, artes Fabriles, &c. Si bene sit dispositus, de itinere, fabrica & militari dignitate. Si sit infelix, de furtis, ludo, de Superum contemptu, & ferendis discordiis. Si vero potens, sed male locatus sit, de cæde, incendio, rapinis, & inlicita cogitat.

Of

A Prognostication,

Of the Sunne ☉.

The ☉ is the glory of heaven, *Quasi solus lucens*, For all other lights become darke at his approach. He is oculus & anima mundi, and as in mans body, the heart is the Sun thercof, so in the Heavens the ☉ is the heart thereof, he is Rex, Dux, & Pater omnium Planetarum, & centrum amoris eorum, a quo vires accipiunt. For the rest of the Starres become orientall, occidentall, stationary, direct, retrograde, combust, and what other accidentall dignities or debilities they have, comes by reason of the ☉.

By Sol we calculate our Grand-fires dates,

Th' increase of Kingdomes and decay of States.,

By him we measure out to us and ours,

Years, Ages, Seasons, Moneths, Days, Minuts, Hours.

☉ Annum in quatuor partes disperit; Ver floribus, Æstatem maturis fructibus, Autumnum Vuarum collectione, Hyemem tristissimo & immiti frigore depingit & figurat, nihil est rerum naturalium quod ejus vim non assatim perferentiat.

His J with Q causeth rain and springing showrs, with Q in aerie signes windes, but if Q be retrograde in moist signes he bringeth great windes and wet weather, with the D hee altereth the aire to the time of the yeare, And with H he ruleth the East winde, with J the West winde, with V the North wind, and with Q the South winde; He is Dominus Anni 1642. cum participatione Q & J.

Seru rubens cælum c. as Indicat esse serenum,

Sed si mane rubet Venturos; Indicat Imbres.

When as the Evening's red, next morne is faire,

But if the Morn be red, then showres are neare.

Et sub Sole pulchri & lætæ facie nati. Imperatores, Reges, Principes, Duces, Marchiones, Barones, Nobiles, Magistratus, Generosi, & Domini magnanimi, &c. Si bene dispositus & locatus, significat magnanimitatem, honorem, splendorem, gloriam, &c. Et è contrà, si sit infortunatus, & malè dispositus, & à malis Planetis malè affectus, &c.

The day and night house of the ☉ is ♌, he is exalted in ♌, he is detrimented in ♎, and his fall is in ♎.

Of

Of Venus ♀.

Venus is the clearest, brightest and most resplendent Star in the firmament except the ☉ and ☿, shee may bee sometimes seene in the day: and this yeare she is our morning star: from the 29 of June last yeare, to the 22 of April this yeare, And from thence to the 7 day of February 1643, she is our evening star: shee sometimes casteth a shadow, and when she is with ♀, she raiseth windes and wet; and with the ☿, she causeth in the Spring and Harvest cloudes and moisture, snowes, and in Winter raine, snow, and whistl-windes; and she causeth the South wind.

The Day house of ♀ is ♈, her night house is ♎, she is exalted in ♋, she is detrimented in ♏, and ♍, and her fall is in ♏.

Et sub Venere nepotes nitiduli, Musici, Lufores, Gemmarii, Tinctores, Concubinae, Meretrices, Saltatores, Pictores, Pharmacopœi, homines sanguinei, Virginales, &c. Si sit bene disposita, de donis, voluptatibus, ornamento, &c. Si cadens, de infami libidine, gamis, scortis, &c. Sed si potens & malè disposita, de stupris, ebrietatibus, dissipandis bonis, &c. cogitat.

Of Mercury ☿.

Mercurie is of a mutable and changeable qualitie, he is seldom seene, because his greatest elongation or distance from the ☉, is not fully a whole sign or 30 degrees. He is oftner retrograde and cometh than any other Planet. Hinc fit ut qui Theoricas Artes, ut sunt Mathesis, Logica Theologia, tractant, etiam qui artificum ingeniosa opera, ut pictorum, auri fabricorum & qui horologia artificiose fabricant, plerumque habent comitem paupertatem, propterea quod ☿ reliquas constellationes vincat & ☿ infœliciter ut plurimum positus sit quæ avocant ingenia a cura corporis & corporalium rerum, & suæ arti tantum intentos faciunt.

☿ with the ☿ is commonly the author of windes, and if he be in waterie signs, retrograde and under the ☉ beams, he bringeth suddaine and great raine with strong blasts of wind, in atery signs he signifieth thunder and lightning, and in fiery signes he causeth suffocations and coultry hot weather in Summer.

The day house of ☿ is ♊, his night house is ♏, and his exal-

A Prognostication.

exaltation likewise is in the signe of M , he is much weakened in I , but much more in X , for that is his fall.

Et sunt sub Mercurio, Negotiatores, Scribæ, computistæ Poetæ, Mathematici, Philosophi, Monetarii, Mercatores, Bibliopola, Typographi, Chalcographi, Sculptores, &c. Et si bene locatus de Artificiis subtilibus, scientiis & doctrinis, &c. Si male positus de furto cauto, deceptiones & mendaciis &c. Et si potens, sed in felix, de accusationibus, venenis, maledicendis, &c. cogitat.

Of the Moone D .

The D is the lowest of all the Planets, and is so called, quia aliena luce luceat. And her light is weak and mutabilious, she represents divers colours, not in her superficies, but in the aire about her, and there is a Prognosticke verse of the Moone which soundeth thus.

Pallida Luna pluit, rubicunda stat, alba jerenat :

If the Moone smile (the fourth day) 'twill be faire,
But if she blush, we shall have blustering ayre,
And if her browes be muffled with a frown,
Most of that moneth shall sad teares trickle down.

The D is of a phlegmaticke nature, and governes all moist bodies, as is palpable in the flux and reflux of the seas, in shell fishes, and innumerable other creatures, she is *Delatrix omnium impressionum & influentiarum aliorum Planetarum*, quæ per glosam ipsius ad nos ultimo decedunt. She is amongst the Planets as a Queene, a Mother, &c.

Nam significat Reginas, Domicilias, seu Matronas, Dominantes, Nautas, Piscatores, Instrutores, Molitores, Venatores, Nucios, Aurarias, Tabellarios, &c.

Her day and night house is I , she is exalted in O , hath her detriment in V , and her fall is in M .

Briefly, Of the 12. houses of Heaven.

The first house is the house of life, from whence Astrologians give judgement of the complection and temperament

ment of the native, the manners, wit and industry of man,
The beginning of all enterprizes, &c.

The second house is the house of substance, of riches, money, and all dependants thereon, as taxes, impositions, mulcts, fines, Amerciaments, Acapitations, &c.

The third house is the house of brethren, and hath signification in some part of Religion, of controversies and disputes in Courts of Justice, of short journeys and embassies, &c.

The fourth house signifieth patrimonies, lands, hereditaments, houses, castles, treasure hid under the earth, &c.

The fifth house is the house of children, gifts, pleasure, banquetting, Musick, and such like things.

The sixth house is the house of sickness, servants, small cattell, &c.

The seventh, is the house of marriage, of open contentions, of buying, selling, of thefts, banishment, &c.

The eighth is the house of death, of sorrow, of hidden treasure, of heritages of the dead, of deadly popsons, &c.

The ninth is the house of Religion, of ecclesiasticall dignities, of longournies and voyages, of robberies and pyracies in them, &c. Dreames &c.

The tenth house is Domus Regia, the house of honours and dignities, of Kings, Princes, and Potentates, &c.

The 11 the house of friends, of Love and favour, &c.

The 12 house is the house of imprisonments, of treacheries, hidden enemies, and great cattell, and the worst place in the Heavens.

Fœlices Animæ, quibus hæc cognoscere primum,

Inque Domus superas scandere cœa sua,

Credibile est illos pariter vitissq; jocissq;

Altius humanis exeruisse Caput.

Hæ cœlestes significationes non modo magnas mutationes tempestatum, sed etiam civilium rerum denunciant, ut ostendunt eventus, qui Comitantur Eclipses, & magnas Planetarum conjunctiones : Nec illa signa villo modo pugnant cum Religione, cum Deus ea, & proposuerit & gubernet.

Cum dicimus Planetam aliquem malum futurum præsignare, nihil aliud sentimus, nisi quod sui Creatoris mandato ut creaturæ in servientes ejus præscientiam imitando hominem ipsam malum nobis ostendunt.
